Lone0001 wrote on Sun, 31 October 2010 11:43 For some reason when I try to play RP2 I can't spawn.

I went in the server with the hostname of A0KK (or something like that) it says "press fire to spawn" nothing happens for me when I do that. I go through one of teleport walls or w/e they're called and still nothing.

I'm just some invisible thing with 999 health and 999 armor, am I doing something wrong?

Scripts seem to be weird when you host your own game, but work fine on the regular server.
