Whenever I try to open My Computer or attempt a system restore....something keeps popping up saying Windows has encountered an error and will now close. I'm pretty sure it's some sort of malware/virus thing and a friend helped me fix this problem a long time ago by giving me a dl link to some anti program but I have no idea what it is or where to find something to help me get rid of this shit.

P.S. I was downloading Oregon trail when this all started lol
