Anyone here a electrician? I have a few questions about outlets and water and maybe a few other electric related questions, for example, my friends family had a normal 8 outlet socket with all these Christmas lights plugged in and it was full of water form rain (none if it was waterproof) but nothing happened, since its a socket shouldn't it burn out or something? when I read up about electrical sockets getting wet I have read that it can blow out the whole room/house power if its not a socket that has its own mini circuit breaker, while other say you will get shocked or start a fire, can someone kinda give me the basics about this please? or a link to a site that can explain?
