Update: Was a simple typo which you changed in the spoiler.

Here's how I done it.

Toggle Spoiler

```
Private Sub OptionThree(ByRef cost() As Integer, capacity() As Integer, graphics_card() As String)
```

```
'Initialises Option Three. (Prompts user for input of Minimum RAM and Minimum Cost then displays the cards which meet specification.)
```

```
Dim MinimumRAM As Integer  
Dim MaximumCost As Integer
```

```
Call Information
```

```
MinimumRAM = InputBox("Please enter a RAM capacity between 1 and 3")  
MaximumCost = InputBox("Please enter the maximum cost.")
```

```
picdisplay.Print "Graphics Card"; vbTab; "Capacity"; Tab(27); "Clock Speed"; vbTab; "Cost"
```

```
For index = 1 To 5
```

```
  If capacity(index) >= MinimumRAM And cost(index) <= MaximumCost Then
```

```
    picdisplay.Print  
    picdisplay.Print graphics_card(index); Tab(17); capacity(index); Tab(27); clock_speed(index);  
    Tab(40); cost(index)
```

```
  End If  
Next  
End Sub
```

I also added passing parameters to make it more efficient.
