Hello,

I've downloaded some new weapons from different forums.

I've placed them ingame as new weapons, but I have a problem.

The weapons look really good, but when you go to first person view, the guy will allways hold it like a handgun...

I've made some pictures of it. Don't mind the giant orange lines inside the pictures.. I've used a demo program silly me.

Problem 2: I have used weapons which have a reload animation in W3Dviewer, but the reload animation won't work ingame.

Each weapon has its own new Ammo and explosions.

Even if I don't set the style to "handgun", he stills hold it like one....
