Subject: cod: black ops stuterring

In black ops everytime I have a encounter where there is a lot of gunfire or nades blowing up my game stutters, fps crashes by about 40.

Tried changing things in the config and basic graphic setting but it still happens. Try disabling my soundcard and it helped but to be honest playing cod without sound is pointless.

Funny thing is it never used to happen until the lastest game update. It even happens in cod zombies.
