I used these steps

http://www.ehow.com/how_2076564_configure-computer-bluetooth-headset.html) to pair my plantronic voyager pro + to my pc. But when i get to step 8, I can't find a "my Bluetooth places" so I cant connect and get my headset to work.

I have a micro adapter for Bluetooth plugged in (<http://www.iogear.com/product/GBU421W6/>) but i didn't install anything, just plugged it in and it worked, so I don't know what to do. Please help? I just bought this thing today for teamspeak, and it has turned out to be such a project
