Dear Aircraftkiller,

I was hoping to be able to use your strings.tbd for my next map. However, theres more to it, i wish to change some things like the death message and some other things. i do not plan to change anything that would conflict with other maps. From my understanding you cannot export Strings.tbd with the mix. And i thought it would be easier if i could put my small changes into yours, that way avoiding any sort of proplems.

Simple list of the things i want to change.

Death message

Entering game message

Leaving game message

Please take the time to look at this, and thank you for listening.
