Goztow wrote on Wed, 20 April 2011 09:40: I don't get the idea of two SSD's. If your data is on your sata's, then you cannot lose data if your SSD fails. Nice setup, BTW.

I understand the 2 SSD's, I just don't understand why RAID1. Seems like a waste to me really.

Proper backups would either save you a lot of money or offer a lot more available disk space and performance.
