TheGunrunHey does any one have any info about that asteroid that has a 1 out of 909,000 chance of hitting earth in 2014?

1/909000

That's a 0.00000001% chance. Not something I would lose sleep over.

Asteroids have always "threatened" Earth, and that's not going to change in the near future. If by some chance an asteroid actually is on a collision course, no one is going to pull any Armageddon heroics. Basically we'd all be screwed anyway, so there's no point in worrying about it.
