I wanted to add the single player atr_lift (from LE) to the mnatr a while back and found that the positioning as well as the animation was a bit messed up.

I looked around to see if maybe someone had already fixed the lift but couldn't find anything but the mnatr_lift fixed(cp1/cp2 maps).

Anyways, I went ahead and fixed the positioning and animation of the SP atr_lift.

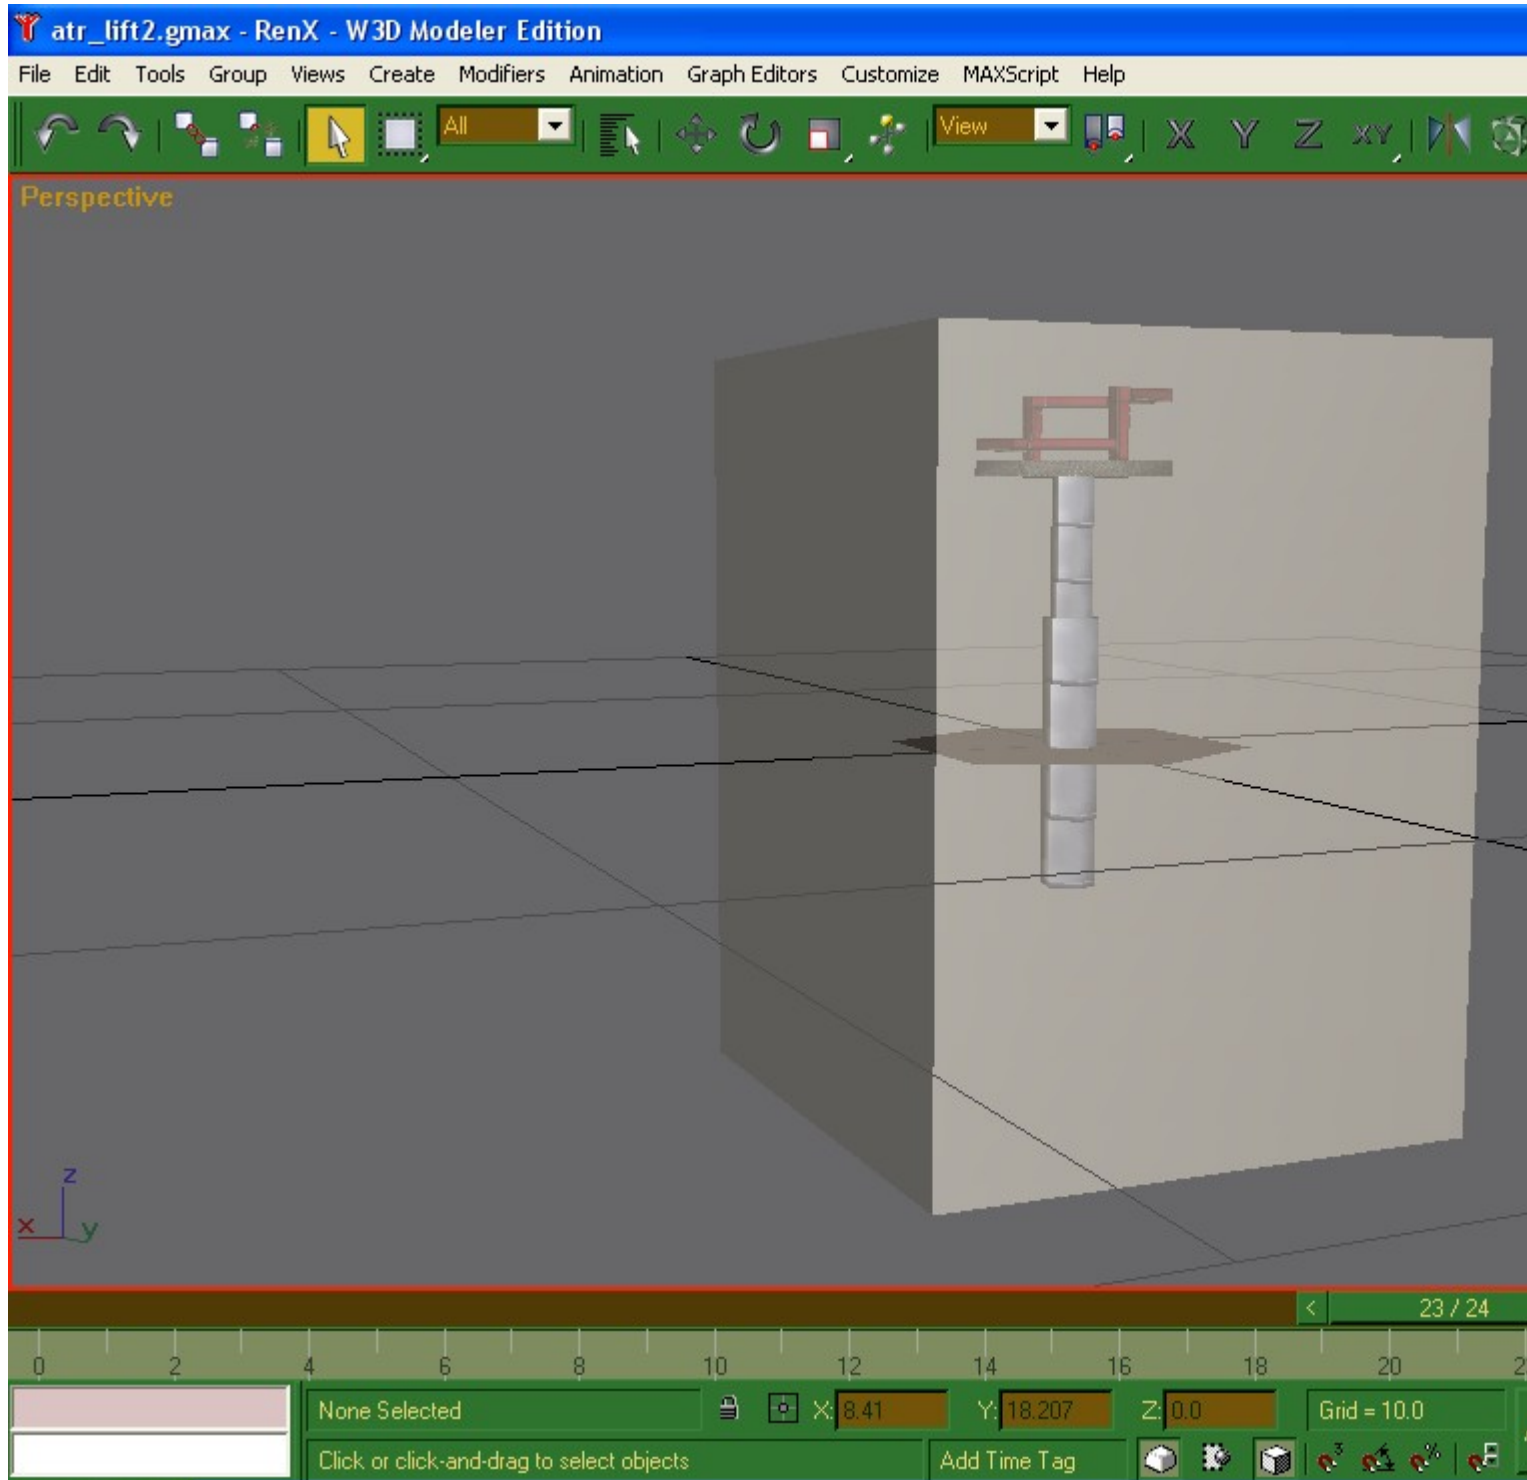

Files included in the .rar -
mnatr.gmax (with proxies)
atr_lift2.gmax
atr_lift2.w3d
temps20.ddb

I guess it is a pretty useless model, but maybe someone can use it.
Plus I like the animated gate on the SP atr_lift.

I will also include some useless screen shots.
