I almost forgot about that tutorial Gen_Blacky. I remember you gave me that link a while back and it was indeed helpful.

Ftw, why stop there we should also mention wire animation.

Here is a two part video tutorial:

Part1 <http://www.youtube.com/watch?v=x5isvIAu6T8>

Part2 <http://www.youtube.com/watch?v=7QwB4ZFejQQ&feature=related>

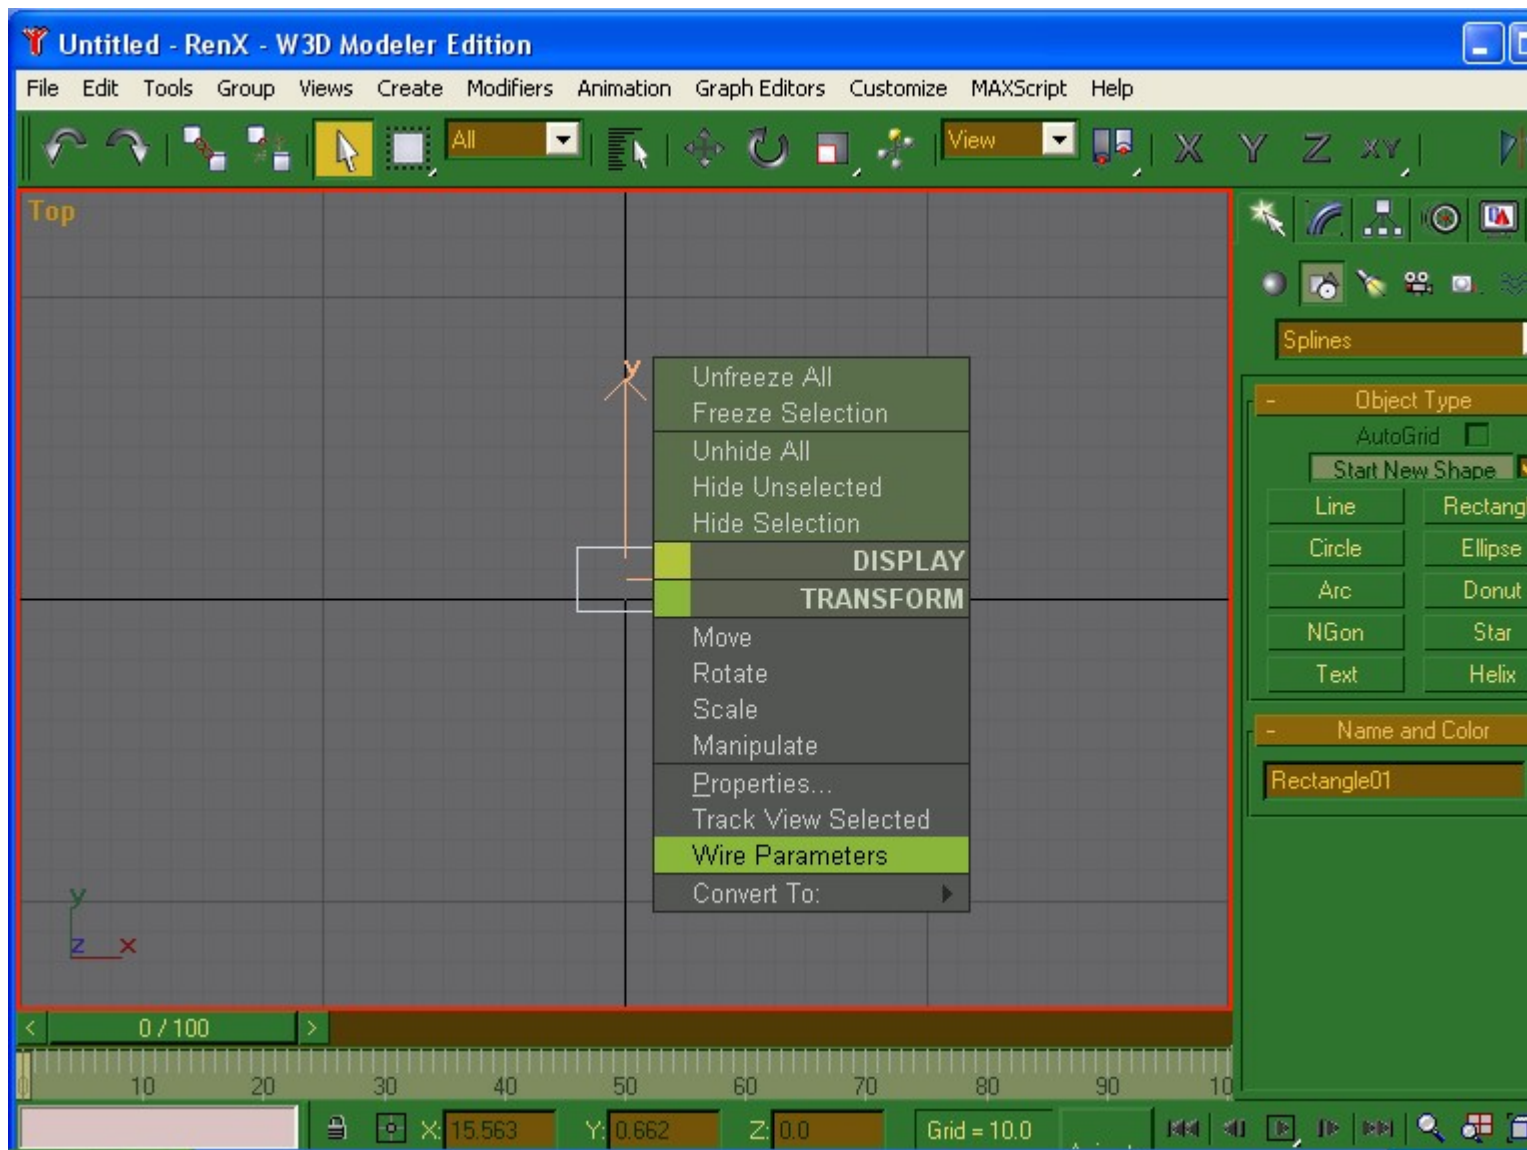

The tutorial was done in 3ds but you can do this in renx by manually assigning the controllers to your object's via Track View.

A bunch of renx screen-shots as to how to assign the controllers:

Edit: I should mention you don't have to do it the same way as he describes you can connect each wheel's rotation individually with the object that uses the position controller.
