Subject: Sla Server Browser Compact
Posted by sla.ro(master) on Sun, 03 Jul 2011 09:54:02 GMT

I finally finished working on my new product, called Sla Server Browser Compact (is a connect tool for Command & Conquer Renegade only)

This tool doesn't get any server list, but you can modify the server list like you want and add your favorite servers, currently i added most important servers witch i think most peoples likes them (Jelly-Server Marathon, n00bstories and exodus co-op) -- side note: if you don't like them, you can remove them, are just default for first time start.

The idea with this tool come from RenIP, but i wanted something more simple and fast , so here is.

This tool runs on any Windows (exception 95/98/ME because they the sys tray plugin doesn't work with them)

Features:
 - runs in background (on sys tray)
 - easy to use and change options
 - not many buttons
 - rapid server connect
 - you can make it to start with windows (me i did this already)

if you found any bug please report. thanks.
