I don't know if this has already been brought up but I thought I should mention it since quite a few people have been having this problem. When you try to connect through WOL it goes to "negotiating firewall" and stays there and won't connect. If you click cancel and reconnect it will work the second time except it seems to lock up for a second. Anyone else having similar problems when using WOL? I know of about 5 people right now who have updated and asked if XWIS is down because they didn't know to cancel it and try again. After I told them to do that they were able to get on. Just thought I'd let you guys know and see if anyone knows a fix or a way around this or if it will be addressed at some point. Thanks!!

-Dave
