After installing TT4 I noticed a missing texture. The texture was somewhere in cp1 so it was never included in the mix but was missing after I installed TT4. Plus there were many other things that needed to be fixed.

I've uploaded the fixed version to this post.

I am wondering if it is at all possible to get this on one of the test servers to check if there may be any other problems that need to get fixed.

Thanks.

Edit: I've placed the download here because for some reason I can no longer access my my486CPU account.
