An even cheaper way, for maps with no defenses only - works especially well on Islands:

One person buys an Engineer and a Humvee/Buggy
Second person gets a Hotwire/Technician

Race to enemy base, drop the Hottie/Tech and guard the building entrances from enemy infantry from entering to interfere with the vehicle. As you know one Hottie or Tech has enough firepower to blow a building all on it's own. I did this on Islands, it was a server with 300 starting credits. I bought a Humvee and engi, a Hottie got in, dropped Hottie of on the far side of the Refinery, drove around killing infantry who tried to get in. Boom, refinery gone within the first minute of the game, which on that map especially is a MAJOR blow.
