Caveman wrote on Sat, 24 September 2011 00:54MDK@ENGLAND@ wrote on Sat, 24 September 2011 00:48there is no crash dumbs as the game will not even start .?

dude this is not just a attack on 4.0 this is a fact it caused loads of problems. you click to play a quik game and end up haveing to delet files or serach for files to be able to play. why can it not do this itself ?

the it waits 3 maps to find it do,s not like you map file and kicks again and ask,s to delet.

then half way throu another map askes you remove a w3d file that you have no idea where to find.. so you have to google or wait in forums 3 hours for a answer to find the file and delete just to want to play for 15 mins 3 hours earlyer lol .

then to top it off it says memmory manger missing so you can not join. ?

like wtf all this to play a game that worked fine for years pre 4.0 .

ok so it is beta and loaded with bugs then why are servers forcing it on people untill it is ready.

and you realy can not say you do not see the player numbers drop over the past week or so ?

10 in storm all mods or oldies

15 in atomix most mods or olides

only server with full list is jelly none 4.0

Its asking you to delete files or download new maps because

1) The server doesn't have your particular skin set as a non advantage skin

2) They have edited the map slightly from the original which makes TT download the 'new' version. If you're missing a file then report this error with a SS so we can actually help you.

Play @ atomix. We have a 4.0 server however we dont enforce custom skins/maps/models. Aslong as you're not banned you should beable to play with 4.0 without any problems.

I am banned at atomix for not changeing my join message that advertised another server . and nurple will never let me in .

dude you can defend the 4.0 as you may have intrest in it but all I have said is true.

it is not for me untill it is ready for the public.

is like release a drug and say yes it will kill 2000 people but then we will find the problems with it and fix so it can help 4000 people.

my comp is not a download machine and is clean and free of bugs for 2 years now untill I used this file. now I am haveing to chase it out of my system as ther is no undelete and it is spread ot all over my hard drive.
