I made the Deathlink6.0 hud compatible with scripts 4.0 (cuz I know some people prefer this hud over the normal hud). I had to replace the gps hud with a radar hud because the gps hud doesn't work properly with scripts 4.0 anymore though. There are also some other things from the d6hud that don't work with scripts 4.0 anymore (minecount, bullet bar, minihealthdisplay and miniammodisplay)

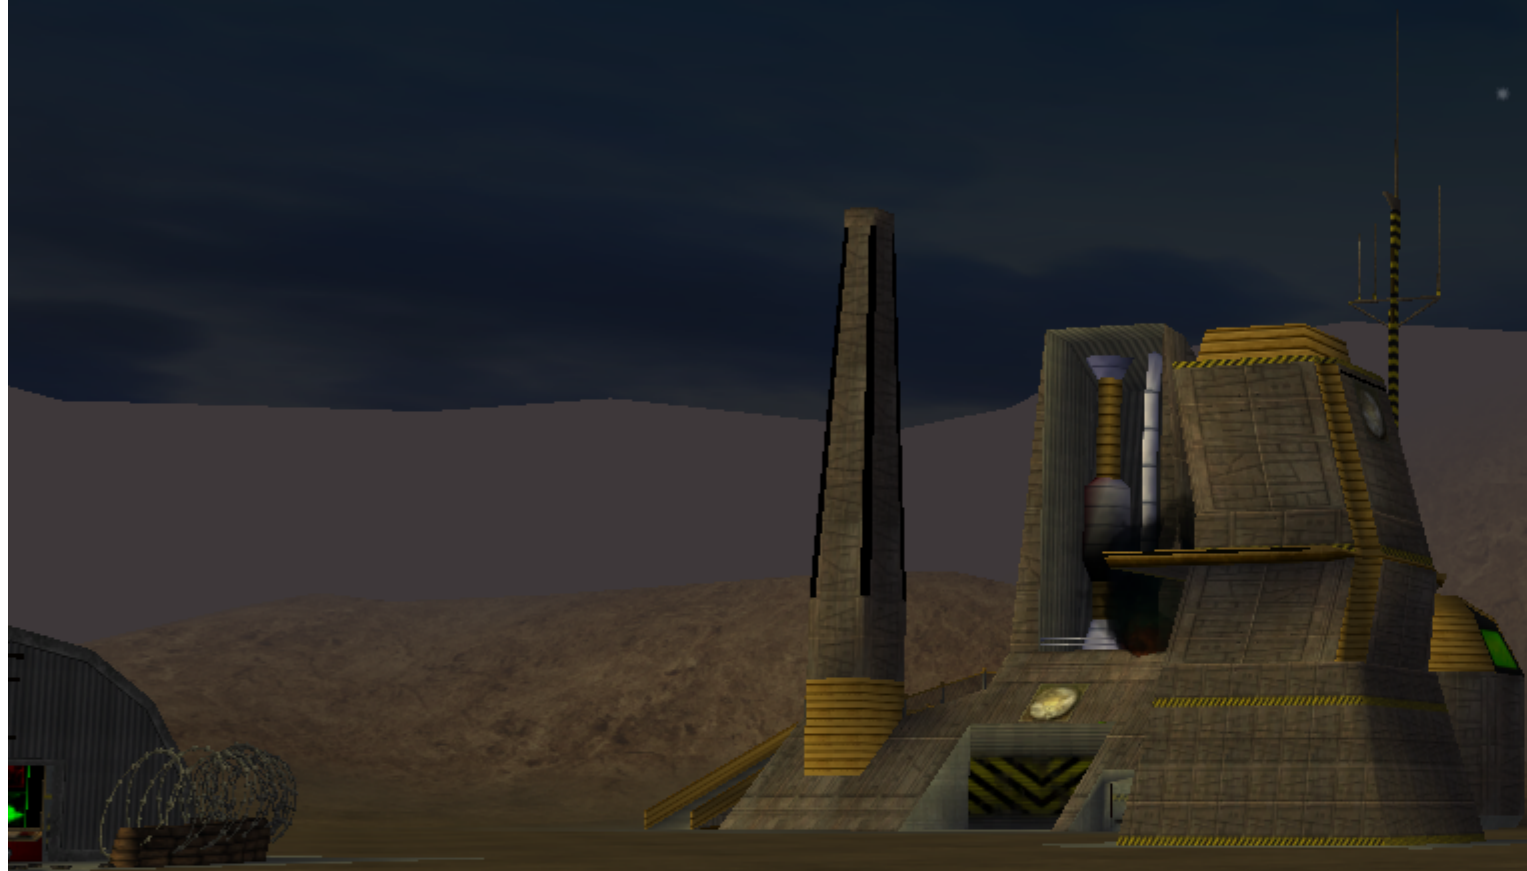

The download is in the attachments
