BEFORE installing scripts 4.0 / TT i created a clear, pure 1.037 renegade installation out of TheFirstDecade, german language.

While installing 4.0 it downloaded 500 MB always.dat, because "This Version is not 1.037".

After this, I had english language.

May be, all this stuff was only downloaded, because of the different language??

I wondered why it was necessary to download 1.037, if it was already installed.....?

I dont want to download every installation 500 MB, takes a while.
