I finally got it to update to .555. Now the servers won't show up at all. Before I updated I noticed there were 3 servers, refresh button is now stuck on "Refreshing". I've installed UT3 3 times, installed RenX 3 times. Even downloaded Steams version of UT3 to see if that will get RenX to work.

As for the RenX Forums site. I'm not sure where to go to get another email confirm sent? I logged in with my RenX login but doesn't let me post at all.
