Starbuzz wrote on Fri, 28 October 2011 00:15totally caught me by surprise, Hypnos...I am a massive free-aim user and noticed no problem when I played today. I have my v-key reconfigured on my right-mouse button, however...I will keep an eye out for any gremlins.

I have the same set up as you, but when I use it seems to suddenly jump back to the centre quite frequently.

I know that when I use it I tend to be facing to the right of my target and then bring it back to the left (so when it centres it automatically makes me face the right, hence why I noticed it straight away)
