Ever since I installed Beta2 I can no longer use my 3.4.4.. I set RenIP to use 3.4.4 I press connect and it loads the first screen (where it says SP, MP, MPP) I get the joining game box while still on that screen and the game hangs. I can't screenshot, I can't press cancel. I have to CAD and end the process.

If I try via WOL I press MP internet and I get a message saying my WOL is out of date.. I haven't installed any games since Beta2 and using WOL with beta2 works fine?
