ok had my printer installed on XP home.. worked.. then i installed XP pro.. could not be arsed to install it.. and that was like 5 months ago

now i thought.. well i will do it tonight...

now i have this problem

now i checked my services and this RPC server was set to manual so i set it to auto.. and retsarted my PC and it did not work.. im so confused
i looked thru my services and cannot find anything else to do with it..

also tried installing this 3 ways.. 1 way i tried was clicking "add printer" it just pops up "operation could not be completed"

anyone have an idea?
