**\*\* SSGM 4.0 support requires server side scripts.dll compiled from TT revision 4076 or higher \*\***

Changes since 1.53.9

- Fix missing MD5 library which prevented auth passwords being verified
- Changed default presets.cfg entry for mp\_GDI\_War\_Factory to "Weapons Factory" from "War Factory"
- Removed some redundant duplicated RenRem functions

Existing plugins might or might not work with this, let me know if you have any problems with them.
