Bear: The Glacier Flying facility was the intended design for Renegade. This has a custom made texture that's got a much better UV map and a lot more detail, so it'll look better by default.

Iranian: Thanks - the idea behind the Nod facility is that it sees greater use than the GDI facility, as Nod tanks are more fragile and require more repairs more frequently than their GDI counterparts. The wear on the pad reflects that.

Camo: I might, not sure though.
