Your router must be blocking it or you don't have the right port defined in the ssgm.ini.

I'm running beta 5 and my server shows on the gsa list with no problems.

there is no need for an up date.

You can contact me via TeamSpeak either on mine dsts.us:3369 or on ts.MultiPlayerForums.com, I can help you set it up right.  
Eh... You're aware that dedicated servers usually don't have NAT-routers in their connection path, right?
