I decided to update the 1.40 version Installer to our new system. Since it will be a while before we got 1.50 ready which will be using it, people can already benefit from the new system installing 1.40 All mirrors were updated (the torrents were NOT updated). A full list of mirrors can be found on our official site at:
<http://www.tiberiumcrystalwar.com>

Pro's:

Alot faster installing the tcw files

Does not get stuck on install screen (not responding) so people don't think it crashed and close it

Create and Read from registry keys and strings

TCW Tools will work as soon as this installer installed tcw because of the Registry Key creation ability

Con's:

Installer size is a bit bigger +60MB

No Uninstaller

FAQ:

I already have the VC++ files installed, what do i do when the TCW installer starts it up?

-- If you are sure it is installed you can cancel it

I already have the .NET FX 4.0 installed, what do i do when the TCW installer starts it up?

-- If you are sure it is installed you can cancel it

I already got the most up2date DirectX files installed. What do i do when TCW installer starts up the DirectX update?

-- It is absolutely best if you DO install this one, it installs additional files which are required specifically by TCW

What does the new installer look like:

Have fun playing Tiberium Crystal War!
