Stefan is Greek name haha, I ain't no prozzy.

But yeah same, in area 54, I get something like 50 ping, and its shit easy to hit stuff

Also home come Jelly, a server running almost no modifications are compared to say area 54, has a shit sfps allday, which gets worse depending on the player count, which is understandable, however, not in a 10v10 or something shitty, as far as my understanding was, is there is any sfps drop at all, even if tiny, it can cause unreasonable lag. I could be wrong and some derp told me
