dont even get why you guys are falling over something like a function name.....

he didnt make a plugin about it so why even bother to talk about that...

dont like the rename copy the code name it back wow

i ported over the same code and tbh that airstrike thing takes more than just that code in the original post was even noted that that code wasnt 100% and the txt files needed were bugged

gratz guys you just chased of someone that did dirty work for you.....

am i glad i only come to ask help and not post my code (which i actually can)
