Yes, I was able to reproduce it every time on my test server yesterday when I had to reproduce a bug with something I wrote that happened while joining when the server gameovered. Everytime I joined the game would freeze after putting me ingame (after the game loaded).

Basically, to reproduce:

1. Execute the 'gameover' command on your test server.
2. Immediately join the server.

What happens for me is that after loading the game freezes up and gives an 'Internal Error'.
