First of, apologize if this is the wrong section, I looked for the nearest Technical Support involving Renegade Client wise.

So, I logged on a 4.0 server, and it autodownloaded a certain map (C&C.Joipa.mix) and I've been having problems with it.

I see only units and certain objects, I get no terrain, No walls, Just an empty floor and the sky.

I've tried removing the file, but a friend informed me that it doesnt neccesarly come with a file.

Is there any way I can remove this map and Redownload it, I've tried downloading the mix file itself and sticking it in my data folder, I've also downloaded a mappack with the map inside it, I've also reinstalled 4.0 and joined the server, and tried it in LAN alone, but it's still bugged..

Here's a few screenshots of the problem

<http://i50.tinypic.com/142wbb.png>

If anyone can provide me with some useful information or an insight on how to fix it it'll be much appreciated, really dont wanna get into the trouble of reinstalling renegade, so many problems surround it and it's just tedious.
