I'm experiencing the same issues.
I reinstalled Renegade since I got a new SSD, but my FPS is not stable at all. Ingame it jumps between 20 and 250 FPS, and on purchase terminals it goes back to 5/6 FPS. It is very laggy overall. There's no difference between maps, it's all the same.

I used to run Renegade with no issues at all but I've got no idea how to fix this.
My graphics drivers are up to date. I got scripts 4.0 beta 5 installed. I'm running windows 7.
