---

I represent "Tiberian Technologies" (creators of the unofficial TT patch for Renegade) and am trying to find out what, if any, issues are known to exist when playing (or trying to play) Renegade using the new "Ultimate Collection" (as installed by the installer and patched by any official EA Ultimate Collection patches and with nothing extra installed on it). I am also trying to find someone who has an unmodified install (i.e. EA official UC patches only, no unofficial patches/extra mods) of the new Ultimate Collection (preferably running on Windows Vista or Windows 7) so that I can get some technical details related to it.

If you know of any issues, please post them here.

If you have an unmodified install (i.e. no unofficial patches, no "custom scripts.dll", no TT patch etc) and want to help me out with some technical details about Renegade in this new patch, please contact me via AIM/ICQ/Yahoo/MSN (details are in my profile) or contact me on IRC [irc.n00bstories.com](#) channel #tt

We at Tiberian Technologies do know there is serial/key issue installing the current version of the Tiberian Technologies patch on top of the Ultimate Collection and the technical information I am seeking is aimed at finding a solution to this problem (among other things)
