That sounds weird. I do not know of any similar report. I am not sure what you mean by "returns when out of renegade". Do you mean that the mouse works normally when back to windows, or that it also responds in game when you are outside renegade?

Could you try to alt+tab out of, and then back into the game? Does that make it work again (for a while)?

Just to be sure: you are running RC1, right? Please post your ttversion.txt file or its contents to make sure.
