Currently renegade has decided to stop working, throwing an error on startup ( ... TT ... please report this ). I'll need to resolve this

C:/Renegade/Client/dllload.txt:Failed to load, error 998. No access to memory location.

Possibly a 32/64 bit mishap whilst loading tt.dll. I'll poke around some more - but if the TT devs know anything that might help, it will be appreciated

Ethenal wrote on Thu, 13 December 2012 19:39Oh snap, you use arch? I'm looking at this on my Arch laptop I wonder if Renegade would run on here...

Yes - follow the normal install procedure ( :shudder: unskippable blink movie in installer :shudder: ) and then install TT. The TT installer I believe both applies the official patch and provides no-cd, but at one point it appears to hang whilst downloading replacement \*.mix files ( I recommend running the installer in a terminal so this can be observed ).

Alternatively you can take another path, or none at all past vanilla, until the multiplayer issue gets sorted out.

Regards, William
