I have re-installed Ren in this order in a completely fresh wine prefix:

CD installer

Installed vcrun6 (needed for next step)

Ran 1.037 updater

Ran TT installer

Magically the issue my OP aimed to resolve did not exist - no C:\Renegade folder exists and the game works (minus multiplayer) without the aforementioned issues. I have updated wine since then - so this may have fixed the issue, but I will look a little further into this.

The pings I mentioned in my last post may be the problem - sending ping packets require special permissions on Linux boxes ( something to do with custom creating packets ), so I'll try to fix this first.

Once I get everything working I will run through the installation procedure again and do a full and concise writeup to replace this topic.

Regards, William
