Me and zunnie where messing around with westwood maps, and we came across a error with strings loading another string file from another mix... which i don't think was intended..

I have included the map mix that caused the issue and some screens of the error and after removing the map from my data folder

loading of a strings file from another conflicting mix

Removal of the mix file "Coop\_detention\_center.mix" everything comes back to normal.. I'm thinking it might of been the name of the mix itself... But i'm not sure
