[i]I hear this a lot and I have to remind everyone that nothing is 100% safe. Nothing. NO food. Im pretty sure food isnt supposed to cause tumors, cancer, and in (depending on the specific gmo product) they have even shown to pop red blood cells and cause serious intestinal distress.

Im pretty sure normal food does not do that.

And on top of that GM foods are not all bad, its Monsantos careless and untested food that is the problem.
