shaitan wrote on Mon, 03 June 2013 08:21Goztow wrote on Mon, 03 June 2013 10:39250 \$ per month for a server? When was that? In 2003?

250/month for 7-8 months or so(we got some upgrades recently to bump up the price). That was for everything, windows box that has all the ren/kf servers on. VPS box that has the minecraft/webserver crap/server space rented out to a couple of people.

Crushu it was a simple "we're moving and leaving two people behind". At any rate my own outburst on this forum was done yesterday. I'm not throwing crap anymore at him.

The screenshot shows the vCenter Catalyst-Hosting interface. On the left, a tree view shows the hierarchy: vCenter.Catalyst-Hosting.net > Catalyst-Hosting > esxi1.catalyst-hosting.n, esxi3.catalyst-hosting.n, and esxi6.catalyst-hosting.n. The main panel displays the 'Catalyst-Hosting' summary, which includes tabs for Summary, Virtual Machines, Hosts, IP Pools, and Perform. The 'General' section shows the following statistics:

Category	Count
Hosts:	3
Virtual Machines and Templates:	27
Clusters:	0
Networks:	6
Datastores:	3

Below the statistics, the 'Commands' section lists three actions: Add Host, New Cluster, and New Folder.
