**Subject: Crashing when using 4.0**

Basically on this PC, I've tried using 4.0 before and had issues in the past, but I figured since the new release I'd give it a bash again - but I'm still having issues.

I can successfully join any server, but the FPS drops to 0 and freezes, only using 3rd person. It's fine I keep the game in first person but as soon as I switch to 3rd person it freezes, no crashing meaning no crash dumps. Any ideas?
