JFW_Give_Powerup_Create will grant a powerup to the object it is attached to, nothing extra needed.

I'll need to lookup the exact custom message ID a powerup sends but basically you just send that to the dp88_teleport script and it will teleport the sender to the specified destination

As for the JFW one, I'll look at its source when I get home, looks like it wasn't documented yet so I'll go ahead and add some at the same time.
