lol believe me I understand, I posted that from my phone in a very tiny window and now I see that it sounds terrible!

Anyway, I've now gotten just C&C_Platforms_b2 and C&C_FjordsTR on our TTFS. However, it seems that when only some of the files are downloadable? I started Fjords, which loaded first because I had the map already installed, so I cleared my TTFS folder in %APPDATA% and then connected again - this time, it loaded about 1.5MB of data then it said "Failed to download required packages." Do you think this would be something missing, or maybe a specific file still 404ing?
