Crash type:
Internal error, nothing else specified.

Set-Up:
I have the latest version of scripts on both my client and server, I am running a single custom plugin. This plugin does something that makes the client crash under these conditions:

- The player is already in the game
- The server loads the next map
- On the OnLoadLevel SSGM event there is a chain of events and it eventually leeds to this code:

GameObject *TimerObj = Commands->Create_Object("Invisible_Object", Vector3(0,0,0));
this->_TimerObject = TimerObj->Get_ID();
TimerObj->Add_Observer(this);

- There no longer is any crash when the Add_Observer line is removed.

Layout of the class 'this' points to:

Toggle Spoiler

class NTCPowerupSpawner : public ScriptImpClass
{
 friend class NTCPowerupControl;
 friend class NTC_Powerup;

 public:
  NTCPowerupSpawner(int SpawnerID, bool Enabled, const char *Preset, Vector3 &Position, int MaxSpawnCount, float SpawnDelay);
  virtual void Timer_Expired(GameObject *obj, int number);
  int Get_Spawner_ID();
  void Toggle_Spawner(bool Enable);
  void Spawn_Powerup(bool Decrease);
 protected:
  void OnThink();
  void Remove_Powerup();
  bool Can_Spawn();
  void Force_Spawn_Powerup(bool Decrease);
  GameObject *Create_Timer_Object();
  void Start_Timer(float Delay = 0);
  GameObject *Get_Object(int &ID);
  void Remote_Spawn_Powerup(bool Decrease);
 private:
  int _SpawnerID;

```
 bool _Enabled;
 StringClass _Preset;
 Vector3 _Position;
 int _SpawnsRemaining;
 int _Item;
 bool _SpawnPending;
 float _SpawnDelay;
 int _TimerObject;
};
```

I was unable to reproduce it with an empty class that called the same pieces of code on the constructor of the class at the same time.

CrashDump attached.
