I get this message whenever trying to start my Renegade via RenDirectConnect or via the TT Renegade executable.

Nothing has changed on my side on firewall or internet connections that I know of. I can check however if you would like.

I can still play online if I click "yes" but it takes almost two minutes for this message to come up.

Error

⚠ Failed to connect to the update server. Please check your internet connection and firewall.

You may be unable to play online, do you want to continue anyway?

[Yes]   [No]
