danpaul88 wrote on Mon, 24 February 2014 14:33My MIX patcher doesn't require 4.0, it's a command line tool for generating diffs between two different versions of a MIX1 archive and applying the diff as a patch to the older version.

I'll dig the files out for you sometime if you like... although it's probably more relevant when you come to release a second version, nothing to patch for the first release.

It can be used with NSIS or any other installer software which can run command line scripts.
Sounds great, can guarantee there will be many patches as even now I make about 2-5 patches a week for our internal tests.
