hifi is working on a GSA master server clone. Works with RenList and BrenBot GSA. Normal FDS GSA doesn't work and I can't get Dragonade's GSA support working either. Renegade Resurrection crashes with an exception. Havent tested the actual GameSpy Arcade software.

Need to figure out why Dragonade's GSA isn't working and then it's ready to go. For RR Launcher support and completeness some of the client <-> master server encryption support needs to be added.

Test server up at 62.113.196.140 (renmaster.cncnet.org)

Code will be open-source most likely.
