You know, its getting pretty old that everytime i get into a game, some half-ass cheat is mowing 135 people down in 3 minutes.

Now i understand that everyone is doing what they can but,
what if we fuck-up the fuck-ups?

Surely there is someone out there who can tear up someone's IP like there's no tomorrow... And if I'm not mistaken, the servers have everyone's IP.

Why I'm not sure, I think that it's only a couple of kids doing it... or really old bald guys with no life. Nevertheless taking out one or two may get rid of a lot of screen names.
