w34g wrote on Tue, 10 June 2014 18:43I have installed renegade on my computer through the first decade.
I downloaded TTscripts 4.1 from their website and have followed tutorials and searched all over the internet for a solution but nothing has worked.

The install works fine, then I click to run the game and it tells me it is installing an update.

After it updates, an error comes up that says
"Renegade cannot run on this computer because it requires Windows XP Service Pack 3 or higher"

I have tried to install SP3 on my computer, but apparantly it won't work either... it says "This Service Pack 3 is for a different hardware platform"

Any help?

What are the specs of your computer? What OS do you currently run? Also, are you a player on Jelly server that got kicked and forced to run 4.0 (just curious).
