And yes, it is for mod support... and not just for BHP mods either. In theory things like RP2 might want different team names etc and this is the correct way to do that as per the developer spec

Rp2 has its own client for browsing servers, this is just for the Renegade map I'm making lol. I'll give this plug in a try and tell you if it does the trick!

Edit: Yeah it seems I'm getting the same issue with this plugin:

The screenshot shows the RenList v1.0.7 application window. The main pane displays a list of servers with columns for IP:Port, Game name, Map, Players, and Passworded. One server, '96.2.58.204:4848' with the game name 'Open world bear hunter!', is selected and highlighted with a blue border. The configuration panel at the bottom left shows the following settings:

Option	Data	Player	Side	Score	Kills	D...	Ping	Time
gamename	ccrenegade	Humans	0				-1	
gamever	838							
hostname	Open world bear hunter!							
hostport	4848							

At the bottom left are 'Connect' and 'Refresh' buttons. The status bar at the bottom displays 'GSA: Total servers: 10 - Available: 10'.
