Jelly no longer appears on my server list.

I have Ren IP to access servers with the latest 4.whatever scripts, but jelly no longer shows up on the renIP server list. I did not know where else to post this question.

So my real question is, is there another server listing utility, or how can I bypass renIP and connect directly?

I know there are still games being played on jelly marathon because I have their IRC channel, and I can see games being played- I just cannot get to them!

Any ideas?

Thanks in advance!
